DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group 1, claims 1-9, drawn to the number of output terminals of each of the plurality of driver circuits (Classified in 345/204: Display Driving Control Circuitry).

Group 2, claims 3 and 10-20, drawn to time-divisionally sending a signal potential which is outputted from each of the plurality of driver circuits to the signal lines of the plurality of columns (Classified in 345/94: LCD Waveform Generation).

3. The inventions listed as Groups 1 and 2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group 1's signal lines may be driven by signal potentials other than the time-divisional signal potentials described in Group 2. Furthermore, Group 2 does not require the driver circuit and output terminal arrangement detailed in Group 1.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2673

5. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species 1, drawn to the number of output terminals of each of the plurality of driver circuits (see Figures 2-6; Page 9, Line 1 - Page 17, Line 18)

Species 2, drawn to time-divisionally sending a signal potential which is outputted from each of the plurality of driver circuits to the signal lines of the plurality of columns (see Figures 7-; Page 17, Line 19 - Page 46, Line 7)

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 2673

6. The claims are deemed to correspond to the species listed above in the following manner:

Species 1, claims 1-9, drawn to the number of output terminals of each of the plurality of driver circuits.

Species 2, claims 3 and 10-20, drawn to time-divisionally sending a signal potential which is outputted from each of the plurality of driver circuits to the signal lines of the plurality of columns.

The following claim is generic: claim 3.

7. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species 1's signal lines may be driven by signal potentials other than the time-divisional signal potentials described in Species 2. Furthermore, Species 2 does not require the driver circuit and output terminal arrangement detailed in Species 1.

8. A telephone call was made to Ronald P. Kananen on August 13, 2001 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
